JDBC Practice

Complete Additional Exercise 1 from the [JDBC Exercise](#)

(<https://q.utoronto.ca/courses/95202/files/3924481/download?wrap=1>) 

(<https://q.utoronto.ca/courses/95202/files/3924481/download?wrap=1>) we did in class.

Put your code into a file called `JDBC.java`.

You may base it heavily on the exercise code `Example.java`, but take out the irrelevant parts.

Once you are convinced your Java program works properly, do the following to demonstrate it:

1. Start psql
2. Import the schema and dataset in `jelly-beans.sql`
3. Exit psql
4. Compile your Java program
5. Run your Java program, entering the threshold age 6.

Capture all of this, including your commands and the output they generate, in a file called `JDBC-demo.txt`.

Submit `JDBC.java` and `JDBC-demo.txt` on MarkUs.
